

The HOME BEAUTIFUL

Flowers and Shrubs Their Care and Cultivation

Beautiful Home Grounds.

BEAUTY OF HOME YARD

By H. M. SHEPARD.

The immediate grounds about the home can be made beautiful, and an effort should be made in that direction. The home grounds should be simple, as large as is consistent with the size of the dwelling.

An acre is not too much. Some think that an acre of land is too much to waste on a simple door yard, but the better the home grounds the better will be the life of the family.

It is a waste of money to have property to be forever making money to enlarge the farm in acre, in buying extra tracts of land for future use, and not improve and make the best of the ground where the wife and children spend nearly all of the best of their life.

Some look forward and prepare too much for pleasure to come, and do not expend any means on making the present the very best that it can be. They let the home grounds and surroundings remain shabby and unimproved, spending the extra money on property to be handed down to the children or putting it in the bank.

This is wrong when there is any neglect in home improvement. If the children need help, by all means, they need it now while they are helpless more than when they grow up and will be able to take care of themselves, perhaps much better than we ever shall be able to care for them.

They need the comforts, healthfulness, and beautifying influences of good homes and surroundings in order to make them healthy, strong, beautiful and good. These are infinitely better than inherited real estate, personal property, or money.

The child whose home life is perfect for physical and mental development will go out into the world with a rich heritage.

The grounds around the home should be well drained and graded to suit the location. The main open part of the space should be lawn of good grass and be kept mowed low at all times so that the air and sunlight may purify the soil.

Abundance of flowers, shrubs and trees are essential for completing the picture, but flowers and shrubs must be massed in clumps and borders along the sides and the trees must be grouped in one place, somewhat removed from one side of the dwelling. Pergolas add much to the beauty of the home grounds.

Under the tree in the cool shady part of the grounds a children's play house or rustic, open structure is a good place for play and rest for both young and old.

We can never get too much of the open air, even though we live in the country; and such a covered place under the trees makes a fine nook in which to read or take a nap and fully enjoy the sweets of outdoor life.

For wet weather concrete walks are economical. They are cheaply and easily made. They need not necessarily be wide, but there should be

High Vase Basket With Sunburst, Hillingdon and Richmond Roses.

The Rector Was Right. If there is anyone who knows the pulse of the people any better than the man of the cloth, let him hear from him. The other day the ladies' guild of an uptown church planned an evening entertainment and reception, says the New York Tribune. They asked the rector to make announcement of it on the preceding Sunday. "This is all right," he said, "but you must charge admission." "Why, this is just a social evening," they chorused in protest. "We are inviting people."

"They won't come," said the rector, "because they will think it is not worth while. But charge a small admission and you will have a good crowd." So the women gave in and subsequent events proved the rector was right.

In British Law.

Should the caves of a man's house project over his neighbor's land, the latter may pull them down at once, according to British law, unless they have so projected for 20 years.

BUILDING SMALL BARN

Truss Shown in Illustration Can Be Worked Out Nicely.

Affords Strong Roof That Will Not Sag and Mow Room Will Be Much Larger—It Has Been Found to Be Quite Satisfactory.

If you are planning to build a small barn or a cattle shed that will store a large amount of hay, it will pay to study the truss that is shown in illustration, writes W. E. Frudden in Farm, Stock and Home. This can be worked out very nicely where rafters are not over eighteen feet in length. It will give a strong barn, a strong roof that will not sag, and the

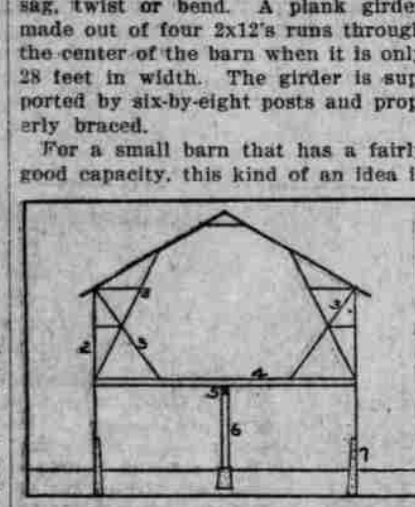

Six-inch Center Post Supporting Truss, Showing Setting in Concrete Base and Proper Method of Bracing.

mow room will be much greater than if you build a timber barn and have lots of cross-ties or beams. A barn with a truss like this one was built in central Iowa a few years ago, and time has shown that it is a good job, also, by the way, a cheap truss, made out of the standpoint of both labor and materials.

It is just a plain gabled-roofed barn with 18-foot rafters of two-by-six and placed two feet center to center. The studding are 16 feet on top of the concrete wall and the hay floor joists of two-by-eight are nine feet from the floor. The mow holds one ton of hay for about every running foot of the barn. Note how the studding, the joints and the rafters are all tied up together so that they cannot bulge, sag, twist or bend. A plank girder made out of four 2x12's runs through the center of the barn when it is only 28 feet in width. The girder is supported by six-by-eight posts and properly braced.

For a small barn that has a fairly good capacity, this kind of an idea is

Cross Section—28-Foot Shed.

1. 2x6-18 ft. rafters, 2 ft. o. c.
2. 2x6-18 ft. studding 2 ft. o. c.
3. 2x6-18 ft. joists
4. 2x6-18 ft. purlins
5. 2x6-18 ft. posts, 16 ft. o. c.
6. 6x8-8 ft. post, 16 ft. o. c.
7. Concrete foundation, 3 ft. x 4 ft. above grade.

A good one to follow. It is economical, easy to build and worth building, strong and durable, and modern in every detail.

HARVEST HAIRY VETCH SEED

Mowing Machine Should Be Used When Oldest Pods Are Ripe—Use Great Care in Curing.

In harvesting hairy vetch seed it should be cut with a mowing machine when the oldest pods are fully ripe. The wheels of the power as well as the knives must not be allowed to pass over the cut vetch, as otherwise much of the seed will be shattered out. As the pods break open readily when dry, the greatest care should be taken in curing and handling to avoid loss of seed. It can be threshed with an ordinary grain threshing machine by the concaves sufficiently to avoid cracking the seed.

Yields of from three to ten bushels per acre of hairy vetch seed may be expected in addition to the rye or other grain with which it is grown. A complete separation of the hairy vetch seed from rye or wheat is best made by use of a spiral separating machine.

ATTENTION FOR YOUNG FOAL

Give It the Run of Grass Paddock For Exercise—Feed Small Quantities of Nutritious Food.

At all times supply pure drinking water. Let the foal run out in a lot or grass paddock for exercise. Accustom it to be handled daily. Feed small quantities of nutritious food often, keeping the food vessels clean, and the foal should thrive and develop well. Remember that a colt should at all times be adequately fed so as to develop it perfectly. Practically half of the full weight of a horse is gained during the first twelve months of its life. If stunted during this period the colt never develops properly; it therefore pays to feed generously.

Cut Worms.

This pest is troublesome only when its numbers have increased to such an extent that all food in the vicinity has been devoured. The larvae then travel in compact masses and here is their vulnerable point of attack. If a furrow is thrown open across their path they will enter it, but they cannot climb out of the steep side, so here they can be utterly exterminated.

Have a Colt Pasture.

Good plan to have a colt pasture, rather than allow the colts to follow the mares in the field.

Grass.

Grass is one of nature's necessities. To the eye it is soft and green upon its surface; but it is much stronger and far-reaching than it looks. It helps to hold together the earth's surface by the close-clinging and intricate entanglements of its roots and it serves this purpose all the year around.

Keep Chicks Scratching.

Keep the chicks busy eating and scratching. If they don't eat they will not grow, and if they don't exercise they will die.

Winter Poultry Feed.

For winter feed for poultry there is nothing better and cheaper than alfalfa leaves.

CULTIVATION OF THE GARDEN

Conserves Moisture, Kills Weeds, Aerates Soil and Increases the Supply of Plant Food.

(By M. P. AHERN, Kansas Experiment Station.) First, last and all the time, let the slogan be "Cultivation." In small garden cultivation must necessarily be by hand. The hoe, rake and fingers will prove efficient tools for cultivation of a square-foot garden. Cultivation conserves moisture. Kills the weeds, aerates the soil and increases the supply of plant food.

Watering should be done carefully, for too much is nearly as bad as too little. It is better to irrigate or sprinkle vegetables in the evening, so that there will be less evaporation. A good way to apply water to a small garden is to make a shallow furrow with the hoe and then permit the water to run into these shallow ditches. As soon as the soil will permit after watering the garden should be cultivated in order to conserve the moisture.

Insects are prevalent this season. The flea beetle has been eating the radish. Spray with powdered arsenate of lead dissolved in water. For the green aphids—these insects feed upon the under side of the leaves, sucking the juice—spray with soap and water, one pound of soap to six gallons of water. Cut worms are likely to be troublesome. Bran mash is a good remedy. Use two or three ounces of sugar or similar substance to a mole of a gallon of water and sufficient bran to make a mixture that will readily run through the fingers.

Protect the hay entrance. For convenience in drawing hay into the barn, the porch shown herewith will be found very satisfactory. The boom from which the hayfork tacks is suspended extends all the way out

Porch Shown and Described Herewith Will Be Found of Much Convenience on Average Farm.

Protected Hay Entrance.

To the gate end of the porch. Convenient dimensions for this porch are 10 feet each way. This will enable the very largest forkful of hay to be taken in without choking the entrance.

As shown, the porch should be closed with a door hung from hinges above, held in place when closed by ropes attached to the lower corners and fastened on the inside of the barn when the door is shut. The chief advantages of this plan are that the hay tacks is always under cover so there is no warping of the wooden support, resting of the metal rod rotting of the rope. The roof above the porch need not extend more than four or five feet beyond the main roof of the barn. The large dimension is the better—Orange Judd Farm.

USEFULNESS OF SMALL TOAD

It Captures and Devours Wasps, Yellow Jackets, Ants, Beetles, Spiders, Worms, Bugs, Etc.

The toad lives from 10 to 40 years, and it can lay over a thousand eggs a year. It has lived two years under foot, but cannot live long without water. It never breeds in the water, but in a hole or under a log.

It captures and devours wasps, yellow jackets, ants, beetles, worms, spiders, snails, bugs, grasshoppers, crickets, weevils, caterpillars, moths, etc. In 24 hours the toad consumes enough food to fill its stomach four times. A single toad will in three months devour over 10,000 insects. If every ten of these would have done one cent damage the toad has saved \$10. Evidently the toad is a valuable friend to the farmer, gardener, and fruit grower, and can be made especially useful in the greenhouse, garden, and berry patch—Ohio State University.

Don't Waste Wood Ashes.

Ordinary wood ashes contain on the average about 5 or 9 per cent of potash and 2 per cent of phosphoric acid. Investigators have considered that there is enough potash and phosphoric acid in a bushel of wood ashes to make it worth 20 to 25 cents. Besides that, some 10 to 15 cents additional might be allowed for the "alkali power" of the ashes. This power is that which enables ashes to rot weeds and to ferment past.

Clean Pigs of Vermin.

Clean your pigs of lice and worms. It helps the pig and saves your feed. The breeder who does not overestimate the pigs that he describes to his prospective customer is the one that usually pleases and satisfies. It is a good step in the direction of a repeated order.

Like Asparagus Roots Beat.

Asparagus experiments at Pennsylvania State college show that large roots are much more productive than small ones, and that it pays to discard the small roots and use only the large, strong ones.

Thinning Helps Apples.

Do some of your apple trees refuse to bear every other year? Try thinning them down to a scant crop the year they are too full. Good apple men say this will correct the eating habit.

Feeding Egg Shells.

If the egg shells are fed to poultry care should always be taken to crush them thoroughly before feeding.

Seedbed for Clover.

Sweet clover likes a firm seedbed. Top working of the soil after a cultivated crop is the best preparation for it.

Dark-Shell Eggs.

Dark-shelled eggs are no richer than white ones, but they look it. There is little in that.

FOR THE GUEST ROOM

PRETTY THINGS MAKE THE WELL-COME SEEM REAL.

First Consideration for a Guest Is Comfort—Annoyance of Delayed Baggage Can Be Overcome by Little Foresight.

It is a good idea to prepare pretty things for fitting up the guest room.

The first consideration for a guest is comfort. She may be delighted with the vase of flowers that greets her from the table, but she will be sure to appreciate a pretty negligee hanging in the closet. One's luggage seldom arrives at its destination with oneself, and a negligee to slip into is often a comfort indeed. Feet are apt to be tired, and until slippers arrive the feet would be glad to rest in a pair of simple bedroom slippers. These are really no trouble at all to make. You just take a pair of lamb's wool soles and a strip of ribbon long enough to cover the sole and four inches wide. One edge is sewed to the edge of the sole and the other is turned down to make a hem through which is run a narrow elastic. This draws the ribbon up, shaping it into a shoe.

Supposing one chooses blue ribbon and works a few rosettes on the toes in embroidery silk and makes a simple kimono of pale blue cotton crepe trimmed with a frill of white lace and finished with a loose belt of pink ribbon. This would be a very dainty outfit and cost but little. Four yards of crepe at 15 cents a yard, plain or covered blue with two yards of lace at ten cents a yard, and two yards of ribbon at 12 1/2 cents a yard, will be ample. In fact if one looked around for bargains one dollar would probably cover the entire cost.

Curtains can be made before they are needed, and one gets such a choice of dainty inexpensive materials in the early spring. The printed lawn in the dress goods section make the prettiest curtains if one cannot find what she wants in the scrim and curtain muslins. White cotton voile can be used for the sash curtains, edged with lace. The colored curtains should be made with a valance and if made as follows one can save on material: Cut two lengths, each measuring 2 1/2 yards, and hem one end. Cut a strip the entire width of the goods
